

Flexible Drill Bits

Professional drill bits drill and fish wire in one easy step. Drill and pull wire through blind areas in ceilings, walls and floors. Shanks are made from premium heat-treated spring steel for maximum flexibility while practically eliminating any retained shank bend. A three-flat non-slip grip on the shank and fish holes in both the tip and shank insure trouble-free wire pulling in either direction. Our tip design provides superior tip/shank contact, increasing the strength and durability of the braise and preventing separation when striking nails or other obstructions. Multiple styles are available for a variety of applications.

Screw Point Flexible Bit, Type B

- Fast and aggressive, self-starting bit
- Ultra-sharp ground threads provide increased pulling power through obstructions
- Designed for easy to tough wood drilling

| Description | Cat. No. | Greenlee Cross Reference |
|--------------------------------------------|----------|--------------------------|
