

FTP Instructions

All filenames and directories are CASE SENSITIVE on INFOSRV1.

We have found that you should NOT use spaces in any of the file names on INFOSRV1. You might replace the spaces with underscores.

Incoming Anonymous FTP on INFOSRV1

INFOSRV1 anonymous ftp is set up so that external users can upload (put) files to the "incoming" directory and internal users can download (get) the files from the anonymous ftp on HOME1 or HOME2 via the "infosrv1_incoming" directory. The anonymous ftp users on INFOSRV1 are not allowed to list or download files in the "incoming" directory and the HOME1 and HOME2 anonymous ftp users are not able to list the "infosrv1_incoming" files. The filenames used must be mutually agreed to by the users doing the transfer. Use no spaces in the filenames.

Putting a file on INFOSRV1

PC users can use 'ftp.exe' found in your windows directory. The relevant commands are:

open infosrv1.ctd.ornl.gov	<- logs you in
ftp	<- in response to request for user name
<i>enter your full email address</i>	<- in response to request for password
cd incoming	<- lowercase
bin	<- optional, allows binary transfer mode
put <i>src_filename agreed_upon_filename</i>	<- case sensitive, no spaces <- <i>src_filename</i> is the directory path and filename on your computer (e.g., c:\subdirectory\filename) <- <i>agreed_upon_filename</i> is the filename you will send to me (e.g., my_talk.ppt)
quit	<- logs you out

Notifying me

Send an email to hunnjd@ornl.gov to let me know you have placed a file on the server and give me the *agreed_upon_filename*.
